May 2009

Ready Jet System, An innovative non-entry mixer drum cleaning method

Introducing the Ready Jet System, a non-entry mixer drum cleaning system provided by Jet Con. Jet Con is centrally located in Ohio and provides the drum cleaning service to the entire state.

Jet Con, LLC, is a new venture in association with an existing 35 year-old construction industry business based in Johnstown, Ohio. Jet Con, LLC is under the direction of Don Dixon.

The equipment used to clean mixer drums utilizes a twenty thousand PSI high pressure water jet that is a wireless remote control system that once again is managed from the outside of the mixer and never requires the need for a person or a jack hammer to enter the confined space of the drum. A boom-mounted high-pressure water jet will clean your drums in an efficient and a cost effective manner.

The Ready-Jet equipment, under the professional control of a Jet Con operator, will accommodate both front and rear discharge mixers. Booster axles will not pose any problem for the Ready-Jet equipment.

A few of the features of the system are that of no confined space entry permits required, no chemicals, and the elimination of damage to drums and blades caused by jackhammers.

For more information, call Don Dixon at 740-321-1119. Put an end to the liability and risks associated with human entry and chipping, while preserving the value of your biggest assets; your truck mixer fleet and your employees!
